

Cottesmore 223

The Cottesmores are both fine examples of a classic Spanish basket. Model 223 is designed for use in a hole in the wall or if the fire needs viewing from all sides. Model 224 is intended for use standing against a wall. As with all fires in this range, The Cottesmore has a powerful 2kW fan heater with thermostatic control to provide a constant comfortable temperature. On all models the flame effect can be used with or without the heater, so you can have a cheerful focal point for your home whatever the weather.

Traditional and contemporary electric basket design fires, handmade in Britain

Halstead 292

Halstead 293

The Halstead models are designed to fit into a standard inset fireplace. With a choice of either solid cast antique brass or black front and ashpan, with real coal bed and pleasant Emberlite Flame effect.

Stamford 227

Inspired by a traditional Georgian design, The Stamford is created from castings which are produced in a Black Country foundry following the authentic process. The castings are enamelled and hand polished to create a classic example of the craftsman's art. They are then built around the electric flame effect and heater to produce a fine functional centrepiece to your home.
