

 solo stove

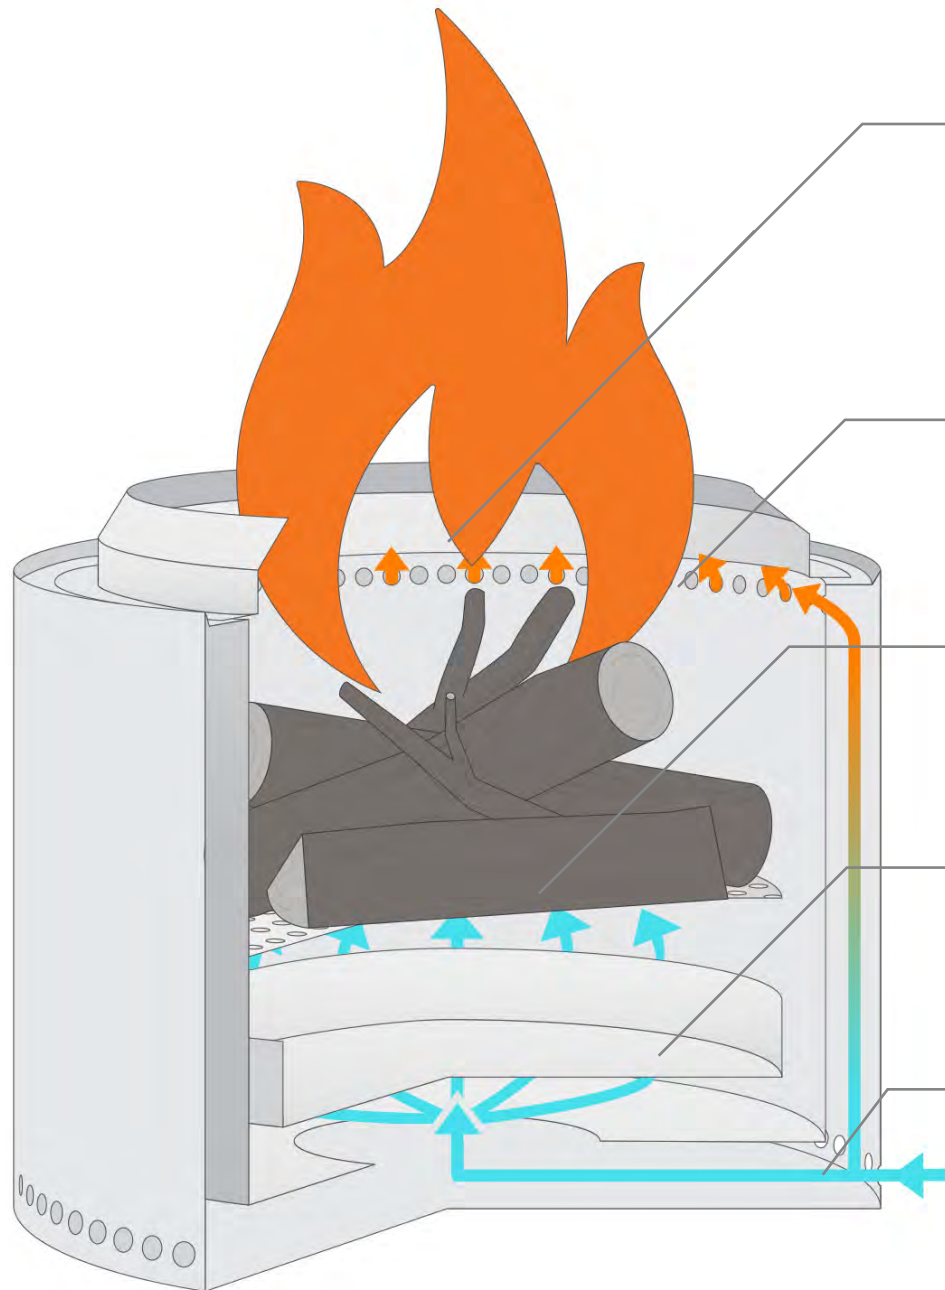

HOW IT WORKS

Designed with a double wall, the Solo Stove is a natural convection inverted downgas gasifier. The air intake holes on the bottom of the fire pit channel air to the bottom of the fire, while at the same time, channeling warm air up between the walls of the fire pit. This burst of preheated oxygen feeding back into the firebox through the smaller holes at the top of the fire pit causes a secondary combustion. This allows the fire to burn more complete which is why there is very little smoke during full burn. A more efficient burn also means you'll use much less wood compared to an open camp fire.

The Solo Stove doesn't just burn wood. It actually cooks the smoke out of the wood and then burns the smoke not once, but twice! It also acts as a windshield while still allowing oxygen to flow inward. Solo Stove indeed produces one of the most efficient wood burning fire pits in the world.

Features

Flame Ring

Directs heat towards the center of your Fire Pit for maximized efficiency. The flame ring also acts as a windscreen while still allowing the oxygen to fuel the flame. The flame ring flips upside down for compact storage and transportation.

Secondary Burn

Vent holes near the top of the burn chamber allow preheated oxygen to fuel the flame resulting in a more complete combustion and a hotter fire with less smoke.

430 Stainless Steel Grate

Allows oxygen to be fed directly to embers from below. This helps to burn biofuel faster and hotter while allowing spent ash to fall out of the process.

Ash Pan

Catches loose ash and prevents it from clogging vital airflow. The ash pan also acts as a heat shield and prevents your stove from scorching the ground beneath it.

Airflow

Rising hot air, and the absence of oxygen created by the combustion process, pulls air through the bottom vent holes. This air movement fuels the fire at its base while also providing a boost of preheated air through the vent holes at the top of the burn chamber.

Solo Stove Ranger

COMPACT FIREPIT

The most compact fire pit in the Solo Stove collection. The Ranger is perfect for smaller spaces, city dwellers and for those who live life on the go!

The Solo Stove Ranger features:

- Ultra portable and light weight
- Double wall design creates low smoke fires
- Flame ring and optional stand nest for compact storage
- High quality stainless steel and craftsmanship
- Includes heavy duty carry case

Solo Stove Bonfire

BACKYARD FIREPIT

Bonfire is our log-burning backyard fire pit. With our unique double wall design, we've reinvented what a backyard fire pit can do. Outdoor adventures await you in your own backyard! Gather your friends and family around the most innovative fire pit you'll ever experience.

The Solo Stove Bonfire features:

- Double wall design for hot and efficient burns
- Low smoke design
- Wind-blocking flame ring nests for compact storage
- Stainless steel precision base plate withstands ultra high temperatures
- Portable enough to take from the backyard to a campsite or beach

Solo Stove Stands

Solo Stove Stands are designed to allow you to use your fire pit on more heat sensitive surfaces like wood decks. By raising up your fire pit and allowing more airflow to pass underneath, you'll be able to enjoy your fire pit in more places than ever before.

The Solo Stove Stands feature:

- Extra airflow vents to allow fire pit to be used on more surfaces.
- Easy setup.
- Easy storage-stand fits right inside your fire pit
