SAFETY NOTICE : Read carefully all instructions before starting the installation. If the stove is not properly installed, a house fire may result. For your safety, follow the installation directions. Contact local building or fire officials about restrictions and installation inspection in your area.

Installation guidelines

Position of the unit

- The position of the appliance must be chosen very carefully in order to obtain the best possible results for heat distribution.
- Position the unit to comply with the minimum clearances to combustible material. Minimum clearances are shown from the vertical portion of the chimney connector. Check that no overhead cross members in the ceiling will be cut. Reposition unit if necessary, being careful not to move closer than the minimum clearances.

Chimney

- Ensure that the flue has sufficient draught (refer to technical details).
- Minimum flue diameter, 10 cm (4" I.D).
- The chimney must be at least 4.5 m (15 ft high).
- The flue must not be shared with any other appliance.
- Downdraughts caused by obstacles close to the chimney top may sometimes be prevented by fitting an anti-downdraught cap to the top of the chimney.
- The chimney must have a constant cross section. Too

large a flue could affect the chimney draught.

- The chimney must be soundly constructed, in order to prevent cold air infiltration.
- The flue must be well insulated, water and air tight. A chimney with a cold internal surface can prevent a good chimney draught and condensation will occur.
- The flue must be swept at least once a year.

Chimney connector

- The appliance must be as close as possible to the chimney. Avoid horizontal flue connection pipes which can dangerously restrain functioning of the appliance.
 - The connector pipe must be either 24 ga. black painted or blued steel or 316 grade 20 ga. stainless steel or 1 mm vitreous enamelled steel, with a maximum diameter of 125 mm (5" O.D.). Single wall pipe may be utilized being careful to maintain clearances to any combustible surface.
- Once the stove has been properly installed the chimney draught must be checked with a draught meter. If the chimney draught is excessive or irregular, a draught stabilizer (barometric damper) must be installed to the connector pipe. q

2. Installation instructions

2.1. Pre-utilisation check

- Check, that the seals are in good condition, that the door closes correctly, that the glasses are not damaged.

2.2. Fitting of the handle

In order to avoid the damaging of the threading, first put the handle in operating position then screw it into the tapping of the lock.

2.3. Mounting the levelling feet

Fit the 4 screws and the 4 caps supplied (on the burner) into each leg of the stove (ill. 2).

2.4. Levelling

It is essential that the appliance sits level on the floor. Adjust the levelling feet (fig. 2). Use a spirit level across the burner pot to check the level. (Fig. 3)

2.5. External tank

CANADA : model 174 10 28

When the stove is connected to an external or remote tank, it must be secured to the floor. The bracket is included (ill. #2).

A barometric fuel tank should not be positioned where it will be in the direct rays of the sun or adjacent to a source of intense heat.

If the tank is more than 8 ft (2,5 m) higher than the stove a pressure reducer must be installed on the oil line (see fig. # 4).

If the tank is lower than the stove a lift pump will have to be utilized (see fig. # 5).

A clearance of 6 " (15 cm) must be maintained between the external/remote tank and the stove.

2.6. Oil flows adjustment

The float regulator has been adjusted at the factory and should not need further adjustment.

If the burner does not work correctly, check possible causes before readjusting the settings :

- Chimney draught,
- Fresh air inlet,
- Oil supply.

Low setting (Refer to fig. 8, n° 3) :

- Set the regulating knob on "1" and let the burner run for a few minutes. The flame must completely cover the bottom of the burner and the catalyser body must be glowing red hot.

- If the flame is too small, the stove will soot up quickly ;

increase the flame by turning the setting screw # 3 clock-wise.

- If the flame is too high ; reduce the flame by turning the setting screw # 3 counter clock-wise

High setting (Refer to fig. 8, n° 2) :

- Set the regulating knob on "6" and let the burner run for a few minutes. The flame must be shaped like a cone and reach the upper part of the window.

- If the flame is too low ; increase the flame by turning the setting screw # 2 counter clock-wise.

- If the flame is too high ; reduce the flame by turning the setting screw clock-wise.

Please note - Very important : The adjustments of the float regulator are very sensitive. The high and the low setting screws must never be turned more than a 1/4 of a turn at a time in any direction from their initial setting.

2.7. Chimney draught

Once the stove has been properly installed , the chimney draught must be checked.

The adjustment of the draught will be made with the barometric damper located at the back of the stove (ill. n° 8)

The reading of the draught must be done once the unit is hot (minimum 30 minutes of use).

Refer to the specifications p. 12 for minimum draught requirement on mini setting and on maxi setting.

2.8. Door closing pressure

The closing latch rotates around a pressure screw positioned cam.

- Loosen pressure screw.
- Turn cam to desired position.
- Tighten pressure screw.

2.9. Maintenance of the Chimney

Chimney and chimney connector should be inspected at least once every three months during the heating season to determine if a soot build up has occurred. If soot has accumulated, it should be removed to reduce the risk of a chimney fire.

3. Operating instructions

3.1. Fuel

Warning : Your stove is fitted with a specific carburator for a specific oil. The fuel oil must be free from any dirt and water which could disturb the stove in operation

	1740602 1740716	1740728 1741028
GB	Diesel oil 35 sec.	Kerosene 28 sec.
Canada		Fuel oil # 2
USA		or fuel # 1

3.2. Lighting procedure

Be sure the control knob is to "0".

- Turn on oil supply,
- Push down gently on the safety lever (# 4 of fig. n° 8). This will allow the oil to flow into the regulator.
- Open the front door, and remove the catalyser from burner. Make sure the inside of the pot is clean thoroughly, and there is no oil accumulation.
- Place 2 tablespoons of methylated spirit or gelled alcohol in the bottom of the pot. Light the starter gel or methylated spirit with a fireplace match or long butane lighter. Place the catalyser back into the burner, being sure it is centered in the burner. Shut the main door.
- Allow the catalyser to heat approximately 30 to 45 sec.. Turn dial to "1" position.
- Allow 10 to 15 minutes for oil fire and draught to stabilize. The catalyser should glow red before adjusting the control knob to a higher setting,

3.3. Operating procedure

- Allow 10 to 15 minutes after lighting to adjust the control knob to a higher setting, usually between a "2" and "4" setting.

When adjusting the heat output, move the control knob only 1 number in either direction, allowing 5 minutes between moves for the flame to re-adjust to new setting.

- If the burner stops during operating, immediatly turn off the control knob (position "0") and wait until the burner is completely cool before repeating the lighting procedure.

3.4. Shutting down

- Set dial to the "0" position,
- Raise the safety lever of the regulator.
- Allow the flame to burn out completely before opening the door.

3.5. Recommendation

- The adjustment of your unit has been done by your installer. Don't touch it. Any change of operation must be reported at once to him.

- This room heater is a hight heat producing appliance and may cause severe burns if touched on the glass front door, or on top directly over the burner - keep children away - Do not use for drying wet clothing.

CAUTION : Never light the burner if there is any amount of oil in pot. Clean out oil before lighting.

Racing : An audible fluttering sound is an indication that there is too much oil in the pot burner and/or a lack adequate draught.

- turn off oil supply and set the control knob in closed position -0-, until fire has decreased to proper burn rate.

- **Do not overfire :** If the stove or chimney connector starts to glow, you are overfiring.

3.6. Maintenance of the stove

Every week : operate the de scaling lever (ill. 10, # 5)) : - Pull the rod, then push the rod in rotating 360 degrees two or three times (CAUTION : The rod is HOT).

Every 3 or 4 months : Clean the burner completely.

- Remove all the parts of the catalyser (# 1, 2, 3 of fig. 9).
- Using a soft bristle brush (a small clean paint brush), carefully brush off the catalyser. Loosen any carbon soot from the bottom of the burner with a putty knife, and vacuum clean. Ensure that the small air holes in burner are free of carbon.

• **At least once a year / End of heating season :** Clean or replace all the oil filters in the oil supply line. To clean the filter of the regulator :

- set the regulation knob in position "0",
- turn off the tankvalve or the valve of the oil supply line, - raise the safety lever of the float regulator,
- place a small container (or a small rag) under the regulator filter opening in order to collect the oil contained in the regulator,
- remove the filter cover plate located under the regulator (ill. 10, # 4) with a screwdriver,
- remove the tubular filter from the regulator. Clean, if necessary, with oil using a soft brush, never a wire-brush,
- replace the filter in the regulator, install the cover plate and secure with the screw.

- Clean all the enamelled panels of the stove with a dry or slightly damp soft cloth.

• Use a soft clean cloth to wipe the front glass when the unit is running at a low burning rate. When the main door is opened for cleaning, the flame will be disturb, and turn to a yellow flame. Clean quickly, but gently. Close the door, the flame will return to a normal burning position.

Note : The appearance of cracks when burning the enamelled units is quite usual and tends to disappear when the appliance is cooling down. It should not be considered as a defect but rather as a patina of the enamel which does not affect its quality nor its service ability.

§ Certificat de Garantie §

§ Garantie Contractuelle

Les dispositions du présent certificat de garantie ne sont pas exclusives du bénéfice au profit de l'acheteur du matériel, concernant la garantie légale ayant trait à des défauts ou vices cachés, qui s'appliquent, en tout état de cause, dans les conditions des articles 1641 et suivant du code civil.

Nos appareils sont garantis **un an** contre tout défaut ou vice de matière et de fabrication. Cette garantie porte sur le remplacement, des pièces reconnues défectueuses d'origine par notre service, port et main d'oeuvre à la charge de l'utilisateur.

Certaines pièces ou composants d'appareils bénéficient d'une garantie de durée supérieure :

- ballons inox démontables ou indépendants : 5 ans
- ballons émaillés indépendants : 3 ans
- corps de chauffe en fonte ou en acier des chaudières : 3 ans
- circulateurs incorporés : 2 ans

§ Validité de la garantie

La validité de la garantie est conditionnée, à l'installation et à la mise au point de l'appareil par un installateur professionnel, et à l'utilisation et l'entretien réalisés conformément aux instructions précisées dans nos notices.

§ Exclusion de la Garantie

Ne sont pas couverts par la garantie :

- les voyants lumineux, les fusibles, les pièces en fonte en contact direct avec les braises des appareils à combustible solide solide, les briques réfractaires, les verres.
- les détériorations de pièces provenant d'éléments extérieurs à l'appareil (refoulement de cheminée, humidité, dépression non conforme, chocs thermiques, effet dorage, etc...)
- les dégradations des composants électriques résultant de branchement sur secteur dont la tension mesurée à l'entrée de l'appareil serait inférieure ou

supérieure de 10% de la tension nominale de 230V.

La garantie de l'appareil serait exclue en cas d'utilisation avec un combustible non recommandé.

La garantie du corps de chauffe (acier ou fonte) de la chaudière serait exclue en cas d'implantation de l'appareil en ambiance chlorée (salon de coiffure, laverie, etc...)

Aucune indemnité ne peut nous être demandée à titre de dommages et intérêts pour quelque cause que ce soit. Dans un souci constant d'amélioration de nos matériels, toute modification jugée utile par nos services techniques et commerciaux, peut intervenir sans préavis. Les spécifications, dimensions et renseignements portés sur nos documents, ne sont qu'indicatifs et n'engagent nullement notre Société.

§ Warranty certificate §

§ Legal warranty

Our products are guaranteed for twelve months against any defect, flaw or imperfection. During this time, all parts judged defective by our Warranty control department may be replaced in our workshops. Incidental costs of transportation and packing payable by the buyer.

Some parts or components have a longer warranty period :

- Cast-iron or steel shell of boiler : 3 years
- Removable or independent stainless steel hot water cylinder : 5 years
- Independent enamelled steel hot wa-

ter cylinder : 3 years

- Incorporated circulating pump : 2 years.

§ Terms of the warranty

This warranty is only valid if :

- The unit has been installed and checked by a professional installer before operating,
- All installation and adjustment instructions listed in the technical manual supplied with the unit have been followed,
- All operation and maintenance instructions have been followed.

§ This warranty does not cover :

- Lamps, fuses, spark plugs, cast iron parts directly in contact with burning coal and wood, firebricks, glasses ;
- Any damage resulting from the use of fuel not recommended in our instructions ;
- Parts which are damaged by external causes such as unadapted chimneys, thunderstorms, damp, faulty pressure or fail in pressure, thermic anomalies, explosions, etc...
- Electrical parts which are deteriorated by any connection or use on a supply circuit with voltage within 10% of the indicated voltage (230 V).

§ Garantie -Karte §

Für unsere Geräte gewähren wir eine Garantie von 12 Monaten. Treten in dieser Zeit Mängel auf, die auf unserer Garantiekontrolle festgestellte Material- oder Fabrikationsfehler zurückzuführen sind, verpflichten wir uns zur kostenlosen Lieferung der Ersatzteile. Transport und Verpackungskosten gehen zu Lasten des Käufers. Für einige Bestandteile der Geräte wird eine längere Garantie gewährleistet :

- Heisswasserkessel aus Gusseisen : 3 Jahre
- Heisswasserkessel aus Stahl : 3 Jahre (nur bei Öl- u Gaskessel)

- Warmwasserboiler aus Edelstahl 5 Jahre
- Eingebaute Umwälzpumpen : 2 Jahre

§ Diese Garantie ist nur gültig , wenn :

- Das Gerät von einem Fachmann installiert und vor Inbetriebnahme geprüft wurde.
- Unsere Installations- und Bedienungsanleitungen respektiert wurden.
- Unsere Betriebs- und Wartungsanleitungen beachtet wurden.

§ Ungültigkeit der Garantie für :

- Sicherungen, Widerstände Gussteile,

die in direktem Kontakt mit Kohle oder mit Holz stehen.

- Schäden, die durch die Verwendung eines anderen, als in unserer Anleitung angegebenen Brennstoffes entstanden sind.
- Schäden, die auf äussere Einflüsse zurückzuführen sind, wie fehlerhafte Kamine, Gewitter, Feuchtigkeit, Druck oder Unterdruck, Temperaturschüsse u.ä.
- Alle elektrischen Teile, die einer mehr als 10 % igen Abweichung von der angegebenen Spannung ausgesetzt wurden (230 V).
